

Pokemon Team Building CRUD App

This project assumes the ff:

- Your OS is Windows 10
- You have MySQL 8 or higher installed
- You have NodeJS installed and npm is fully functional
- Your browser can run ES5 Javascript properly

Steps for running the program

1. Extract the everything from the zip
2. Open command prompt in the **/database** directory and run the ff:

Inside /database directory:

```
mysql -u root -p
```

Type your root password to enter the mysql console

Inside mysql console:

```
source final_db.sql
```

Wait for Mysql to finish executing all the queries

3. Open a **separate** command prompt in the **/server** directory and run the ff:

Inside /server directory:

```
npm install  
npm run dev
```

You should see a line saying: `Am running at port 3000 .`

The backend is now up and running.

4. Open a **separate** command prompt in the **/client** directory and run the ff:

Inside /client directory:

```
npm install  
npm run serve
```

You should see a few lines saying:

```
App running at:  
- Local:    http://localhost:8080/  
- Network:  http://192.168.1.143:8080/
```

The frontend is now up and running.

5. Open your browser and enter the url: <http://localhost:8080/#/pokemon>
